

### **Problem Solving, Reasoning and Numeracy**

We will be fishing out Nemos from a bowl and using them in addition subtraction games. We will then write down the corresponding number sentences. A jellyfish and octopus game will also help us with simple counting in 1's and 2's. Using numbers in the environment and on sea creatures we will be learning how to recognise numbers beyond 10.

We will be estimating how many objects we can see in a group and check our answer by counting.

We will be finding Pirate Treasure from positional and directional clues.

We will be finding out the names of flat 2D shapes and solid 3D shapes to describe objects they can see.

This term we will be comparing how many people like different sea creatures and represent this information using pictures and numerals in charts.
